Forecast for Saturday 18 Dec 2021

Weather: Staying dry, however the cloud cover is harder to pin down. Above the inversion (around 500m) cloud free skies are expected, however at mid-levels patchy cloud appearing allowing the risk of fog around the foothills early and late, also occasional bright and sunny intervals by day.

Chance of cloud free mountain/hill tops above 800m: Generally 100% but chance cloud below the inversion.

Visibility: Good or very good, becoming very poor with cloud.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View

The dominant area of high pressure brings a strong inversion, with highest temperatures across the peaks significantly warmer than around the foothills.

Forecast for Sunday 19 Dec 2021

Weather: Again it will be difficult to pin down the cloud detail with subtle small changes bringing significant differences for location of the most favoured peaks. Most staying dry again with clear skies above the inversion that slowly lifts from the north later in the day. Mid-level cloud more likely in the north, potentially thickening enough to bring some light rain or drizzle, while best of bright and sunny spells appear in the south.

Maximum wind: Variable 10mph or less, mainly from the east or northeast.

Chance of cloud free mountain/hill tops above 800m: Generally 100% but also variable amounts of cloud below the inversion.

Visibility: Good or very good, becoming moderate or poor in any light rain or drizzle in north, also very poor in cloud.

Temperature: **Glens:** Minus 3 Celsius increasing 7 Celsius
At 800m: Plus 4 Celsius becoming Minus 2 Celsius late evening
Freezing level: 1200m lowering 700m later
